As of July 23, 2010, Program Directors and Principal Investigators who use eRA Commons, the National Institute of Health electronic grant processing system, must use My NCBI’s “My Bibliography” option to manage their professional bibliographies.

The integration of “My NCBI”—the personal online tool available through PubMed—and Commons will allow grantees to easily track compliance with the NIH Public Access Policy using a simple color-coded key in My Bibliography. In addition, they will be able to start the manuscript submission process, associate their NIH extramural awards with their publications, and designate delegates to manage their bibliography via My NCBI.

http://tiny.cc/tgfr4

eRA’s redesigned Web site includes frequently asked questions and step-by-step directions for creating and linking accounts, managing your My Bibliography citations, and delegating the authority to maintain My Bibliography content.

Looking for libraries who cater to those interested in the history of medicine?

Check out The Directory of History of Medicine Collections of the National Library of Medicine.

The collections described in this biennial directory database provide research, reference and interlibrary loan services to scholars interested in the history of the health sciences. Some of the subjects include: dentistry, veterinary medicine, nursing, military medicine and pharmacy. While the directory is by no means exhaustive, it serves to draw attention to the depth and variety of history of medicine collections available to researchers.

You may search the directory at:

ScanGrants™ is a website intended as a supplemental tool for locating funding sources related to the improvement of individual and community health. The sources listed may be of interest to virtually anyone associated with the health field, including medical researchers, social workers, nurses, students, community-based health educators, academics and others.

Funding sources include those of private foundations, corporations, businesses and not-for-profit organizations, with an emphasis on less traditional funding opportunities. Federal and state funding sources are typically not included on ScanGrants™ because they are readily available on other sites.

You may sign up to get updates about grants in your area of interest by e-mail or RSS feeds.

**Expert Poster Services from Photocopy Center**

Did you know that the Photocopy Center offers much more than standard copies and prints? Posters in a variety of sizes are becoming a specialty, with many faculty, staff and students using them to advertise and spruce up lectures and events.

Poster services include: A typical turnaround time of one business day; possibility for poster content submission via e-mail, USB or disk in just about any file format; a variety of sizes and backing – from roll up to foam board and more; great prices for the area, with an average price of $10.50 per square feet.

Call, e-mail or stop by the Photocopy Center on the 2nd floor of the Hammer Health Sciences building with any requests or questions. We’re located at the far end of the floor, past the CUMC IT Service Desk and study carrels – just look for our poster!

**Tools Behind CUMC IT Services**

CUMC uses many different applications for academic, business and research purposes. Here are a few tips on some of them:

**Resource 25 WebViewer**

This program provides at-a-glance, real time schedules for classrooms, auditoriums and spaces managed by the Classroom Technology Support group within CUMC IT. It’s also used to reserve spaces and technical equipment for special events on campus. A short training session and a special login are required for anyone interested before they are allowed to use this program. WebViewer is an intranet site, so it can only be viewed on campus or when connected to the CUMC network via VPN. For details, go to: [http://www.cumc.columbia.edu/it/cts/r25.html](http://www.cumc.columbia.edu/it/cts/r25.html)

**Bradford Campus Manager**

Bradford helps students connect to the CUMC network from on-campus housing and verifies that basic security policies on these computers are met. Since implementing Bradford on campus, we’ve been able to register more students for wired connectivity much faster than before, and also seen a big reduction in virus and malware-infected computers.

[http://www.cumc.columbia.edu/it/getting_started/bradford_steps.html](http://www.cumc.columbia.edu/it/getting_started/bradford_steps.html)

**Cyrus**

Cyrus is actually the program that manages all columbia.edu e-mail addresses, the "back end" of the campus mail servers. It can be accessed by many other software programs, including the web-based CubMail program, Outlook, Apple Mail and Thunderbird. Some aspects of your columbia.edu e-mail can be managed on the myUNI page: [http://uni.columbia.edu](http://uni.columbia.edu) – password resets, quotas and vacation messages.

Please note that CUMC faculty, staff and students must not configure automatic e-mail forwarding as per the federal HIPAA/ARRA act, to prevent the possibility of releasing patient health information and other sensitive data: [http://www.cumc.columbia.edu/it/getting_started/email_policies.html](http://www.cumc.columbia.edu/it/getting_started/email_policies.html)
